Guru99 Bank

Manual Functional Test Plan — Manager & Customer Modules

Application URL: <https://demo.guru99.com/>

DOCUMENT VERSION

1.0

DATE

September 21, 2026

PREPARED BY

Dina Ahmed

STATUS

Approved for Execution

WHAT THIS PLAN COVERS

Manager Login

Customer Management

Account Management

Transactions

Balance & Statements

This document guides QA execution for Guru99 Bank's demo application. It defines the objectives, scope, environment, and entry/exit criteria for manual functional testing across the Manager and Customer modules, and serves as the reference of record for test planning, execution, and sign-off.

1. Introduction

1.1 Purpose

This document defines the test strategy, scope, resources, and schedule for testing the Guru99 Bank web application — a demo banking system. It will focus on validating the application's functionality, usability, data validation, error handling, and user workflows from both **Manager** and **Customer** perspectives.

1.2 Application Overview

Guru99 Bank is a sample banking application with two primary user roles:

- **Manager** – manages customers and accounts (add/edit/delete customers, add/delete accounts, view balance)
- **Customer** – performs banking transactions (deposit, withdraw, fund transfer, view statements)

2. Objectives

- Verify that all functional modules of Guru99 Bank work as per expected business rules.
- Validate login authentication for both Manager and Customer roles.
- Ensure data integrity during CRUD operations on customer and account records.
- Validate transactional operations (deposit, withdrawal, fund transfer) update balances correctly.
- Validate positive and negative user scenarios.
- Verify input field validations and error messages.

3. Scope

3.1 In Scope

Module	Features to be Tested
Manager Login	Login with valid/invalid credentials
Customer Management	Add Customer, Edit Customer, Delete Customer, Search Customer
Account Management	Add Account, Delete Account
Customer Login	Login with valid/invalid credentials, login by selecting customer
Transactions	Deposit, Withdraw, Fund Transfer
Account Info	Balance Enquiry, Mini Statement, Change Password
Navigation	Menu links, logout functionality

3.2 Out of Scope

- Performance/load testing
- Security penetration testing

- Mobile responsiveness testing
- Backend database validation
- Third-party payment gateway integration (not applicable to demo site)

4. Test Strategy

4.1 Types of Testing

- **Functional Testing** – Validate each feature against expected behavior
- **UI Testing** – Verify layout, field labels, error messages
- **Negative Testing** – Verify that the application handles invalid inputs, empty fields, incorrect data, and invalid user actions correctly
- **Smoke Testing** – Verify that the main application functionalities are available and stable enough for detailed testing

4.2 Test Design Techniques

- **Equivalence Partitioning** – Divide input data into valid and invalid groups
- **Boundary Value Analysis** – Test values at and around the boundaries of accepted input ranges
- **Decision Table Testing** – Test combinations of conditions and their expected results
- **State Transition Testing** – Verify how the application behaves when moving between different states
- **Error Guessing** – Use common defect patterns and tester experience to identify potential failure scenarios

4.3 Test Approach

All testing will be performed manually. Testers will execute test cases directly in the browser, recording actual results, pass/fail status, and screenshots (where relevant) for each test step. No automation tooling is used in this cycle.

5. Test Environment

Item	Details
Application URL	https://demo.guru99.com/
Browsers	Chrome (latest)
OS	Windows 10
Test Data	Dynamically created customers (no fixed accounts; created via Manager module)
Tools	Browser DevTools (for element inspection/debugging only); Excel/Sheet or test management tool for logging results
Testing Method	100% Manual

6. Entry and Exit Criteria

6.1 Entry Criteria

- Test plan reviewed and approved
- Test cases written and reviewed
- Application is accessible and stable at the test URL
- Test data preparation strategy defined

6.2 Exit Criteria

- All planned test cases executed
- No open Critical/High severity defects
- Test summary report shared with stakeholders
- 95%+ pass rate on core functional test cases

7. Roles and Responsibilities

Role	Responsibility
Test Lead	Test planning, review, status reporting
QA Engineer(s)	Test case design, manual execution, defect logging

8. Deliverables

- Test Plan (this document)
- Test Case document
- Defect/Bug reports
- Test Execution/Summary Report

9. Risks and Mitigation

Risk	Mitigation
Demo site data resets or is shared publicly (other testers may alter/delete data)	Create fresh test data per session; avoid dependency on fixed pre-existing accounts
Site downtime/instability (public demo environment)	Retest during off-peak hours; log environment-related blockers separately
No password recovery/email validation possible on live demo	Mark such flows as out-of-scope or test with placeholder assumptions

10. Assumptions

-
- The application is a publicly available demo/sandbox environment; no real financial data is involved.
 - Test data (customers/accounts) created during testing may be visible to other users of the shared demo site.
 - No dedicated staging/QA environment exists separate from the public demo.
